EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Plunkett (Reg. No. 57,253) on 4/2/08. The amendments were to move up allowable subject matter from the dependent claims into the independent claims to place the application in condition for allowance. As per MPEP 713.04 a separate interview summary form is not provided as the substance of the interview has been summarized herein.

The application has been amended as follows:

IN THE CLAIMS:

1. (Currently Amended): A security system for allowing a client to access a protected resource through an application container, the security system comprising:

the application container, which provides services for a protected resource, wherein the application container delegates authorization decisions to a security service by passing an access request and a callback handler to the security service when the application container receives the access request for a protected resource from the client;

context information, wherein the context information comprises one or more parameter values describing the access request, identity of the protected resource, and profile information describing the client;

the security service for making a decision to permit or deny the access request, wherein a plurality of security plug-ins that implement an access decision interface are plugged into the security service, and wherein the plurality of security plug-ins use the callback handler to request the context information from the application container for the access request, and wherein the plurality of security plug-ins determine roles for which the client is entitled, and wherein association of the client to roles is computed dynamically at runtime, and wherein each of the plurality of security plug-ins determines a contributory decision selected from a group comprising: permit, deny, and abstain, and wherein depending on output from each security plug-in the security service determines entitlements for the client to use with the protected resource; and

the security service is located at a first computer, and the protected resource is located either at the first computer or at a second computer.

2. (Previously Presented): The security system of claim 1 wherein the application container of claim 1 reads an application deployment description and registers the application deployment description within the security service.

3. (Cancelled)

4. (Previously Presented): The security system of claim 2 wherein the application container is a Web Application container.

5. (Cancelled)

6. (Currently Amended): The security system of claim 1 [[5]] wherein the security service further includes an access controller for transferring the access request to the plurality of security plug-ins, and for combining the contributory decisions into an overall decision by the security service to permit or deny the access request.

7. (Currently Amended): The security system of claim 1 [[5]] wherein one or more of the plurality of the security plug-ins represent a business function related authorization policy.

8. – 9. (Canceled)

10. (Currently Amended): The security system of claim 1 [[5]] wherein a deny or abstain by any one of the plurality of security plug-ins causes the security service to deny the access request.

11. (Currently Amended): The security system of claim 1 [[5]] wherein an abstain by any one of the plurality of security plug-ins does not cause the security service to deny the access request.

12. (Currently Amended): The security system of claim 1 [[5]] wherein the security service further includes security plug-ins that implement an audit interface for auditing the determinations of the plurality of access requests.

13. – 17. (Canceled)

18. (Currently Amended): A method of allowing a client to access a protected resource through an application container, the method comprising:

receiving at the application container, which provides services to the resources it contains, an access request from the client to access the protected resource;

communicating the access request from the application container to a security service with the access request and a callback handler, wherein the application container delegates authorization decisions to the security service by passing the access request and the callback handler to the security service when the application container receives the access request for the protected resource from the client;

making a decision at the security service to permit or deny the access request, wherein a plurality of security plug-ins that implement an access decision interface are plugged into the security service;

using the callback handler at each security plug-in to request context information from the application container for the access request, wherein the context information comprises one or more parameter values describing the access request, identity of the protected resource, and profile information describing the client;

determining entitlements for the client to use with the protected resource depending on output from each security plug-in, wherein the plurality of security plug-ins determine roles for which the client is entitled, and wherein the association of the client to roles is computed

Art Unit: 2135

dynamically at runtime, and wherein each of the plurality of security plug-ins determines a contributory decision selected from a group comprising: permit, deny, and abstain; and
communicating a permitted access request to the protected resource.

19. (Previously Presented): The method of claim 18 wherein the application container of claim 18 reads an application deployment description and registers the deployment description within the security service.

20. (Canceled)

21. (Previously Presented): The method of claim 19 wherein the application container is a Web Application container.

22. (Cancelled)

23. (Currently Amended): The method of claim 18 ~~22~~ further comprising:
transferring, via an access controller, the access request to the plurality of security plug-ins, and combining the contributory decisions into an overall decision by the security service to permit or deny the access request.

24. (Currently Amended): The method of claim 18 ~~22~~ wherein one or more of the plurality of the security plug-ins represent a business function related access policy.

25. -26. (Canceled)

27. (Currently Amended): The method of claim 18 ~~22~~ wherein a deny or abstain by any one of the plurality of security plug-ins causes the security service to deny the access request.

28. (Currently Amended): The method of claim 18 ~~22~~ wherein an abstain by any one of the plurality of security plug-ins does not cause the security service to deny the access request.

29. (Currently Amended): The method of claim 18 ~~22~~ further comprising:
auditing the determinations of the plurality of access decision mechanisms.

30 – 41. (Canceled)

42. (Previously Presented): The security system of claim 1, wherein computation of a dynamic role occurs immediately before an authorization decision for the protected resource.

43. (Previously Presented): The security system of claim 18, wherein computation of a dynamic role occurs immediately before an authorization decision for the protected resource.

The following is an examiner's statement of reasons for allowance: The prior art does not teach the limitation as amended above for independent claims 1 and 18. Particularly, the prior art does not teach that each of the plurality of security plug-ins determines a contributory decision selected from a group comprising: permit, deny, and abstain.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
